# Chapter 1

## Hierarchical Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Application . . . . .	5
Application_gos_workers . . . . .	6
Application_usual_person . . . . .	7
Smart_Card . . . . .	12
Base_Card_Decorator . . . . .	9
Bank_Decorator . . . . .	8
General_Info_Decorator . . . . .	10
Medical_Decorator . . . . .	11

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">Application</a>	
The main class you use to contact with system . . . . .	5
<a href="#">Application_gos_workers</a>	
Same <a href="#">Application</a> , but specially made for people, who work in/with government . . . . .	6
<a href="#">Application_usual_person</a>	
Same <a href="#">Application</a> , but specially made for people, who don't work in/with government . . . . .	7
<a href="#">Bank_Decorator</a>	
All bank information about person . . . . .	8
<a href="#">Base_Card_Decorator</a>	
Just simple decorator . . . . .	9
<a href="#">General_Info_Decorator</a>	
Decorator of Info . . . . .	10
<a href="#">Medical_Decorator</a>	
Medical life . . . . .	11
<a href="#">Smart_Card</a> . . . . .	12

## Chapter 3

# Class Documentation

### 3.1 Application Class Reference

The main class you use to contact with system.

```
#include <Application.h>
```

Inheritance diagram for Application:

#### Public Member Functions

- virtual std::string [get\\_general\\_information](#) ()  
*A function with general info about person like name, birth date and gender.*
- std::string [get\\_medical\\_information](#) ()  
*A func about medical information like insurance number and blood\_type.*
- std::string [get\\_bank\\_information](#) ()  
*All info about banks.*

#### 3.1.1 Detailed Description

The main class you use to contact with system.

#### 3.1.2 Member Function Documentation

### 3.1.2.1 `get_bank_information()`

```
std::string Application::get_bank_information ( ) [inline]
```

All info about banks.

#### Returns

Returns u card\_number and individual taxes number

### 3.1.2.2 `get_general_information()`

```
virtual std::string Application::get_general_information ( ) [inline], [virtual]
```

A function with general info about person like name, birth date and gender.

#### Returns

Returns all general info

Reimplemented in [Application\\_gos\\_workers](#), and [Application\\_usual\\_person](#).

### 3.1.2.3 `get_medical_information()`

```
std::string Application::get_medical_information ( ) [inline]
```

A func about medical information like insurance number and blood\_type.

#### Returns

Gives u insurance number and blood type

The documentation for this class was generated from the following file:

- `Application.h`

## 3.2 `Application_gos_workers` Class Reference

Same [Application](#), but specially made for people, who work in/with government.

```
#include <Application_gos_workers.h>
```

Inheritance diagram for `Application_gos_workers`:

## Public Member Functions

- `std::string get_general_information ()` override  
*A function with general info about person like name, birth date and gender, also place of work.*

### 3.2.1 Detailed Description

Same [Application](#), but specially made for people, who work in/with government.

### 3.2.2 Member Function Documentation

#### 3.2.2.1 get\_general\_information()

```
std::string Application_gos_workers::get_general_information ( ) [inline], [override], [virtual]
```

A function with general info about person like name, birth date and gender, also place of work.

#### Returns

Returns all general info

Reimplemented from [Application](#).

The documentation for this class was generated from the following file:

- `Application_gos_workers.h`

## 3.3 Application\_usual\_person Class Reference

Same [Application](#), but specially made for people, who don't work in/with government.

```
#include <Application_usual_person.h>
```

Inheritance diagram for `Application_usual_person`:

## Public Member Functions

- `std::string get_general_information ()` override  
*A function with general info about person like name, birth date and gender, also information if this person ever worked on government.*

### 3.3.1 Detailed Description

Same [Application](#), but specially made for people, who don't work in/with government.

### 3.3.2 Member Function Documentation

#### 3.3.2.1 `get_general_information()`

```
std::string Application_usual_person::get_general_information ( ) [inline], [override], [virtual]
```

A function with general info about person like name, birth date and gender, also information if this person ever worked on government.

#### Returns

Returns all general info

Reimplemented from [Application](#).

The documentation for this class was generated from the following file:

- `Application_usual_person.h`

## 3.4 Bank\_Decorator Class Reference

All bank information about person.

```
#include <Bank_Decorator.h>
```

Inheritance diagram for Bank\_Decorator:

### Public Member Functions

- `std::string get\_bank\_information ()` override  
*Bank information like card number and itn.*
- **`Bank_Decorator`** ([Smart\\_Card](#) \*s)

## Additional Inherited Members

### 3.4.1 Detailed Description

All bank information about person.

### 3.4.2 Member Function Documentation

#### 3.4.2.1 get\_bank\_information()

```
std::string Bank_Decorator::get_bank_information ( ) [inline], [override], [virtual]
```

Bank information like card number and itn.

#### Returns

Returns card number and individual taxes number

Reimplemented from [Base\\_Card\\_Decorator](#).

The documentation for this class was generated from the following file:

- [Bank\\_Decorator.h](#)

## 3.5 Base\_Card\_Decorator Class Reference

Just simple decorator.

```
#include <base_decorator.h>
```

Inheritance diagram for Base\_Card\_Decorator:

## Public Member Functions

- **Base\_Card\_Decorator** ([Smart\\_Card](#) \*s)
- virtual std::string **get\_general\_information** () override
- virtual std::string **get\_medical\_information** () override
- virtual std::string **get\_bank\_information** () override

## Public Attributes

- [Smart\\_Card](#) \* **wrappee**

### 3.5.1 Detailed Description

Just simple decorator.

The documentation for this class was generated from the following file:

- `base_decorator.h`

## 3.6 General\_Info\_Decorator Class Reference

Decorator of Info.

```
#include <General_Info_Decorator.h>
```

Inheritance diagram for General\_Info\_Decorator:

## Public Member Functions

- `std::string` [get\\_general\\_information](#) () override
- **General\_Info\_Decorator** ([Smart\\_Card](#) \*s)

## Additional Inherited Members

### 3.6.1 Detailed Description

Decorator of Info.

### 3.6.2 Member Function Documentation

## 3.6.2.1 get\_general\_information()

```
std::string General_Info_Decorator::get_general_information ( ) [inline], [override], [virtual]
```

gives u general information

## Returns

Returns a string from name and date of birth

Reimplemented from [Base\\_Card\\_Decorator](#).

The documentation for this class was generated from the following file:

- General\_Info\_Decorator.h

## 3.7 Medical\_Decorator Class Reference

Medical life.

```
#include <Medical_Decorator.h>
```

Inheritance diagram for Medical\_Decorator:

### Public Member Functions

- std::string [get\\_medical\\_information](#) () override
- void [get\\_blood\\_type](#) ()
- **Medical\_Decorator** ([Smart\\_Card](#) \*s)

### Additional Inherited Members

#### 3.7.1 Detailed Description

Medical life.

#### 3.7.2 Member Function Documentation

### 3.7.2.1 get\_blood\_type()

```
void Medical_Decorator::get_blood_type ( ) [inline]
```

brief Gets blood type from base

### 3.7.2.2 get\_medical\_information()

```
std::string Medical_Decorator::get_medical_information ( ) [inline], [override], [virtual]
```

Medical info

#### Returns

Blood type and insurance

Reimplemented from [Base\\_Card\\_Decorator](#).

The documentation for this class was generated from the following file:

- Medical\_Decorator.h

## 3.8 Smart\_Card Class Reference

Inheritance diagram for Smart\_Card:

### Public Member Functions

- **Smart\_Card** (int \_id=0)
- const std::string **get\_name** ()
- const std::string **get\_date\_of\_birth** ()
- const std::string **get\_taxes\_number** ()
- const std::string **get\_insurance** ()
- const std::string **get\_bank\_card\_number** ()
- const std::string **get\_driving\_licence** ()
- virtual std::string **get\_general\_information** ()
- virtual std::string **get\_medical\_information** ()
- virtual std::string **get\_bank\_information** ()

The documentation for this class was generated from the following file:

- Smart\_Card.h
